

Application No. 10/825,046  
Amendment Dated December 12, 2005  
Office Action mailed November 2, 2005

**AMENDMENT TO THE CLAIMS:**

The following listing of claims will replace all prior versions of claims in the application.

**LISTING OF THE CLAIMS:**

Claim 1 (Original): A sterilized barrier apparatus, comprising  
a sterile, tubular sheath that is collapsible into a collapsed condition and  
expandable from the collapsed condition into an expanded condition;  
a hollow extension tube secured to a distal end of the sterile, tubular  
sheath; and  
an aspiration tube having a distal end to which is attached the hollow  
extension tube, the sterile, tubular sheath being secured to the aspiration tube at  
a location spaced from the distal end of the aspiration tube and being in the  
expanded condition.

Claim 2 (Original): A sterilized barrier apparatus of claim 1, further comprising  
a surgical pack that includes the aspiration tube, the surgical pack including a cassette  
arranged to receive contents of the aspiration tube that are being aspirated, the  
aspiration tube having a proximal end closer to the cassette than the distal end of the  
aspiration tube, the location where the sterile, tubular sheath is secured to the aspiration  
tube being closer to the proximal end than to the distal end of the aspiration tube.

Application No. 10/825,046  
Amendment Dated December 12, 2005  
Office Action mailed November 2, 2005

Claim 3 (Original): A sterilized barrier apparatus of claim 2, further comprising an instrument console with suction pump that, when activated, suctions the aspiration tube, the aspiration tube projecting from the instrument console.

Claim 4 (Original): A sterilized barrier apparatus of claim 1, further comprising a surgical handpiece attached to the distal end of the aspiration tube.

Claim 5 (Currently Amended): A sterilized barrier apparatus of claim 1, wherein ~~the~~ a surgical handpiece is attached to a distal end of the hollow, extension tube.

Claim 6 (Withdrawn): A method of forming a sterilized barrier, comprising:  
attaching a hollow extension tube to a distal end of an aspiration tube;  
pulling a proximal end of a sterile, tubular sheath over and along the aspiration tube to expand the sterile tubular sheath from a collapsed condition into an expanded condition, a proximal end of the hollow extension tube being secured to the sterile, tubular sheath; and  
securing the proximal end of the sterile, tubular sheath to the aspiration tube at a location spaced from the distal end of the aspiration tube, thereby forming a sterilized barrier.

Claim 7 (Withdrawn): A method of claim 6, further comprising aspirating atmospheric air through the aspiration tube.

Application No. 10/825,046  
Amendment Dated December 12, 2005  
Office Action mailed November 2, 2005

Claim 8 (Withdrawn): A method of claim 6, further comprising aspirating fluid within a sterilized container through the aspiration tube.

Claim 9 (Withdrawn): A method of forming a sterilized barrier, comprising:  
securing together a hollow extension tube and a distal end of an aspiration tube;

attaching together a distal end of an aspiration tube and the hollow extension tube, and

securing a sterile, tubular sheath to the aspiration tube at a location spaced from the distal end of the aspiration tube as the sterile, tubular sheath is in an expanded condition, the sterile tubular sheath being expandable from a collapsed condition into the expanded condition.

Claim 10 (Withdrawn): A method of claim 9, further comprising aspirating atmospheric air through the aspiration tube.

Claim 11 (Withdrawn): A method of claim 9, further comprising aspirating fluid within a sterilized container through the aspiration tube.

Claim 12 (New) A sterilized barrier apparatus of claim 1, wherein the sterile, tubular sheath is configured so as to be collapsible into the collapsed condition in an accordion fashion.
